## Thermostats

Euroswitch offers single-pole thermostats with bimetal disc and quick opening contact, available in various configurations.

The cut-in temperature and differential may vary, depending on the specific application.

Cut-in temperatures are controlled with the minimum electric load in the contact circuit.

Main applications: temperature control in hydraulic systems, radiators, heat exchangers, lubrication system, etc.

From an electrical point of view, there three main types:

- with two-way normally-open (NO) electrical contacts (SPST)
- with two-way normally-closed (NC) electrical contacts (SPST)
- with three-way changeover electrical contacts (SPDT)

- In the NORMALLY OPEN (NO) version on Fig. 1, the contact is open, i.e. there is no flow of current in the absence of temperature. When the temperature setting is reached, the electrical contact closes.

- The diagram of Fig. 2 shows a Thermostat with NORMALLY CLOSED (NC) contacts in the absence of temperature. We can see that the contacts are closed and the signal is present on the external contacts. When the temperature setting is reached, the electrical contact rises and interrupts the signal.

- In the SWITCHING CONTACTS (SPDT) of Fig. 3 version, the temperature of the fluid on the separating element causes a micro-switch to switch. Either NC or NO contacts, or both, can be used in this version.

## Operating conditions

Compatibility of the sensor for the intended use must be verified with the specific fluid and under correct operating conditions.

## 温控器

Euroswitch提供单极双金属片和快速断路触点温控器，拥有各种不同配置。

介入的温度和误差可根据不同的用途而改变。

介入的温度用接口电路的最低电负荷控制。

主要用途：液压系统、散热器、换热器、润滑系统、汽车等领域的温度控制。

主要存在三种类型：

- 带有SPST常开电触点
- 带有SPST常闭电触点
- 带有SPDT三通切换电触点
- 在图1的常开版本中，触点断开，即在温度不到的情况下不存在电流通过。温度到达设定值后，电触点闭合。
- 图2中展示的是一个在温度不到的情况下，带有常闭电触点的温控器。事实上，我们看到在温度不到的情况下，电触点闭合，在外触点上有信号显示。温度达到设定值后，电触点断开，信号停止。
- 在图3的转换触点版本中，分流器上的液体温度，决定了微动开关的转换。在这个最新版本中，可以无差别地使用常闭、常开电触点或两者兼用。

## 应用条件

传感器应根据具体的液体和环境情况使用。

### Electrical load

The electrical characteristics of the contacts are detailed under each series of temperature switches. Our Technical Department can help customers who have any doubts or queries. In the event of a slow temperature variation in temperature switches with SPST contacts, it is advisable not to pilot electrical loads with characteristics close to the current limits of the contacts. In such a case, it is preferable to put a relay between the temperature switch and the load. In temperature switches with SPDT contacts, correct operation of the microswitch requires an operating speed in the range 0.1 mm/sec to 1 m/sec.

For products with max 48 V power must be managed thanks to a SELV system.

### Assembly

It is advisable to assemble the temperature switch vertically, with the electrical connection facing upwards, in order to prevent foreign particles from accumulating inside the body.

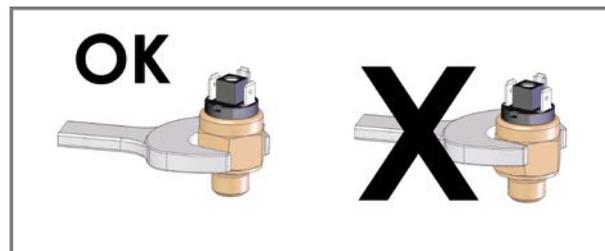

### 先导电荷

在与每一系列的温控器相关的数据中，列入了触点的电气特性。我们技术部可以为客户解答任何疑问。如果带SPST触点温控器中的温度变化缓慢，建议不要先导特性接近电触点的电流极限值的电荷。在这种情况下，建议在温控器和负荷间插入一个继电器。在带SPDT触点的温控器中，为了使微动开关能够正确工作，要求驱动速度高于0.1MM/SEC，低于1M/SEC。

对于最大开关电压48V以内的产品，需要通过一个SELV类型的系统供电。

### 安装

建议纵向安装温控器，电气连接朝上，以避免长时间内在套管中积聚微粒。

### Impact and vibration

The temperature switch contact may get damaged if subjected to impact (e.g. if dropped) or strong vibration.

### 碰撞和震动

当受到非正常碰撞或强烈震动时，温控器的触点可能会损坏。

### Caps and connectors

All our temperature switches can be protected by caps and connectors. The protection degree can be IP54 or IP65, depending on the model.

### 保护盖和连接器

我们所有的温控器都由保护盖和连接器保护。根据类型，防护等级可达IP54或IP65（有些特殊版本可达IP 67）。

### Special configurations

Euroswitch also manufactures special temperature switches, such as pre-wired, with a stainless steel case, or degreased for use with oxygen. Whatever your requirements, feel free to contact our design and sales office staff, who will be able to suggest the most suitable product to meet your requirements.

### 特别配置

根据特殊要求，可以制作特别配置的温控器（例如：预装电缆的，带有不锈钢套管的，为使用氧气而进行脱脂的等）；有任何需求，请联系我们的技术-销售部，将会为您推荐最适合您的用途的产品。

## CE Marking

Our products have been designed in compliance with the applicable EC Directives and Regulations and bear the CE mark based on the following classification:

- a) Electrical devices and apparatus used at a mains voltage of 50-1000V AC and 75-1500V DC.
